If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

09/785,000

Applicant(s)

LEE ET AL.

Examiner

HUNG Q. PHAM

Art Unit

2168

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 January 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-27 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-27 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

- *Publication Dates of the Secondary Reference*

Applicants' request for the publication dates of the secondary reference have been answered in the Office Action 02/23/06.

- *Duplicate Claims, Warning*

The warning of duplicate claims is sustained.

- *Claim Objections*

The objection of claims 1 and 25-27 has been withdrawn in view of the amendment.

- *Claim Rejections - 35 USC § 101*

Applicant's arguments with respect to the rejection of claim 1 under 35 U.S.C. § 101 have been fully considered but they are not persuasive.

Claim 1 is directed to *a method for providing navigational information for facilitating navigation and user socialization at web sites*. This claimed subject matter lacks a practical application of a judicial exception (law of nature, abstract idea, naturally occurring article/phenomenon) since it fails to produce a useful result. Specifically, the claimed subject matter does not produce a useful result because the claimed subject matter fails to sufficiently reflect at least one practical utility set forth in the descriptive portion of the specification. More specifically, while the described practical utility (utilities) is (are) directed to *a system and method that enables participants at a Web site, with possibly common or complementary attributes and goals, to collaborate, communicate, coordinate, and socially navigate within the Web site* (Specification, Page 1 Lines 9-12), the claimed subject matter

Art Unit: 2168

relates ONLY to *mapping information about people, activities, and social interactions at the web site onto said graphical representation for facilitating user socialization* The claimed limitation for *facilitating user socialization* is an intended use limitation¹ and is not given weight according to MPEP 2111.04.

In light of the foregoing arguments, the 35 U.S.C. § 101 is hereby sustained.

- Claim Rejections - 35 USC § 112

(1) Applicant's arguments with respect to claim 1 under 35 U.S.C. § 112, first and second paragraphs, have been considered but are moot in view of the new ground(s) of rejection.

(2) Applicant's arguments with respect to claims 25-27 under 35 U.S.C. § 112, first paragraph, have been considered but they are not persuasive.

Regarding the rejection of claims 25-27 under 35 U.S.C. § 112, first paragraph, applicant directs the examiner to FIG. 3A and paragraph beginning on Line 11 Page 17 as the description of the rejected claimed limitation. However, as shown in FIG. 3A, and as illustrated in the Specification, each major category is mapped to a pie segment (Specification, Page 18 Lines 8-9). According to FIG. 3A and the specification, each category is mapped to a corresponding pie segment. Neither FIG. 3A nor the paragraph beginning on Line 11 Page 17 illustrates *a corresponding pie segment of the two or more categories as recited in claims 25-27.*

¹ MPEP 2111.04:

- (A) "adapted to" or "adapted for" clauses;
- (B) "wherein" clauses; and
- (C) "whereby" clauses.

The determination of whether each of these clauses is a limitation in a claim depends on the specific facts of the case. In *Hoffer v. Microsoft Corp.*, 405 F.3d 1326, 1329, 74 USPQ2d 1481, 1483 (Fed. Cir. 2005), the court held that when a "whereby" clause states a condition that is material to patentability, it cannot be ignored in order to change the substance of the invention." *Id.* However, the court noted (quoting *Minton v. Nat'l Ass'n of Securities Dealers, Inc.*, 336 F.3d 1373, 1381, 67 USPQ2d 1614, 1620 (Fed. Cir. 2003)) that a "whereby clause in a method claim is not given weight when it simply expresses the intended result of a process step positively recited." *Id.*

Art Unit: 2168

In light of the foregoing arguments, the 35 U.S.C. § 112, first paragraph, is hereby sustained.

- *Claim Rejections - 35 USC § 103*

Applicant's arguments with respect to the rejection of claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.

Specification

The title of the invention is not descriptive with respect to the changes in the preamble of claim 1. A new title is required that is clearly indicative of the invention to which the claims are directed.

Duplicate Claims, Warning

Applicant is advised that should claim 1 be found allowable, claim 25 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-27 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-24 are directed to *a method for providing navigational information for facilitating navigation and user socialization at web sites*. This claimed subject matter lacks a practical application of a judicial exception (law of nature, abstract idea, naturally occurring article/phenomenon) since it fails to produce a useful result. Specifically, the claimed subject matter does not produce a useful result because the claimed subject matter fails to sufficiently reflect at least one practical utility set forth in the descriptive portion of the specification. More specifically, while the described practical utility (utilities) is (are) directed to *a system and method that enables participants at a Web site, with possibly common or complementary attributes and goals, to collaborate, communicate, coordinate, and socially navigate within the Web site* (Specification, Page 1 Lines 9-12), the claimed subject matter relates ONLY to *mapping information about people, activities, and social interactions at the web site onto said graphical representation for facilitating user socialization*. The claimed limitation *for facilitating user socialization* is an intended use limitation and is not given weight according to MPEP 2111.04.

Claims 25-27 are direct to a method, program and system. This claimed subject matter lacks a practical application of a judicial exception (law of nature, abstract idea, naturally occurring article/phenomenon) since it fails to produce a useful result. Specifically, the claimed subject matter does not produce a useful result because the claimed subject matter fails to

Art Unit: 2168

sufficiently reflect at least one practical utility set forth in the descriptive portion of the specification. More specifically, while the described practical utility (utilities) is (are) directed to *a system and method that enables participants at a Web site, with possibly common or complementary attributes and goals, to collaborate, communicate, coordinate, and socially navigate within the Web site.* (Specification, Page 1 Lines 9-12), the claimed subject matter relates ONLY to *mapping information about people, activities, and social interactions at the web site onto said geometric pattern.*

Claim 27 is directed to a system comprising software per se. Software per se is not one of the four categories of invention. Software per se is not a series of steps or acts and thus is not a process. Software per se is not a physical article or object and as such is not a machine or manufacture. Software per se is not a combination of substances and therefore is not a composition of matter. Therefore claim 27 is non-statutory.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 25-27 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Art Unit: 2168

Regarding claims 25-27, the claimed limitation, *a corresponding pie segment of the two or more categories*, was not described in the Specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 2, 5, 6 and 24-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Minar et al. ["Visualizing the Crowds at a Web Site", The Java Applet at <http://www.media.mit.edu/~nelson/research/crowdvis>] and Andrews et al. [Information Slices: Visualizing and Exploring Large Hierarchical using Cascading, Semi-Circular Discs].

Regarding claim 1, Minar teach *a method for providing navigational information for facilitating navigation and user socialization at web sites* (Abstract), *the method being utilized in a computer networking*

Art Unit: 2168

system having one or more central processing units, one or more memories, and one or more network connections (World Wide Web as disclosed in the INTRODUCTION implies a computer networking system having one or more central processing units, one or more memories, and one or more network connections), the method comprising steps of:

creating at least one instance of a mapping data structure for a web site, the mapping data structure representing two or more categories, each of the categories divided into subcategories of ordered levels of specificity, each of the ordered levels of specificity being a grouping of subcategories of the same levels of specificity (The Site Map of a web site at the IT Media Lab as an instance of a mapping data structure for a web site, the Site Map representing two or more categories, e.g., Software Agents, Synthetic Characters..., each of the categories divided into subcategories of ordered levels of specificity, e.g., each topic divided into four kinds of pages as the first level of specificity, e.g., pages for topic, pages for a project..., each kind of page is a group of particular pages under that kind as the second level, each of the ordered levels of specificity being a grouping of subcategories of the same levels of specificity, e.g., the first level of specificity is a grouping of four topics as subcategories at the same levels of specificity (Minar, "Visualizing the Crowds at a Web Site"-Page 186-187 and the Java Applet));

generating a graphical representation of said at least one instance of said mapping data structure, said graphical representation graphically depicting the two or more categories and the subcategories within a plurality of categories of the two or more categories (As in the full dynamics visualization at page 2 as a graphical representation of said at least one instance of said mapping data structure, the web pages are organized into four topics: Software Agents, Synthetic Characters, Gesture and Narrative Language, and Epistemology and Learning. Each topic is placed in one quadrant of the display, and there are four kinds of pages in each topic: page for the topic as a whole (shown in red), for a project (green), for a person (blue), or for a course (yellow). As seen, the full dynamics visualization depicting the two or more categories, i.e., Software Agents and Synthetic Characters, and the subcategories, i.e., page for the topic as a whole (shown in red), for a project (green), for a person

Art Unit: 2168

(blue), or for a course (yellow), *within a plurality of categories of the two or more categories*, i.e., Software Agents and Synthetic Characters); and

mapping information about people, activities, and social interactions at the web site onto said graphical representation (the circles as in CROWD VISUALIZATION represent people near the documents they are currently visiting, VISUALIZATION, and popular groups of pages on the web site are visibly crowded with people jostling around as they move from page to page, and seldom-visited portions of the site are identifiable by faded color, CROWD DYNAMICS).

The difference between Minar and the current invention is the displaying of the categories. The current invention displays the data structure by *mapping each of two or more categories to a corresponding pie segment and the subcategories are separated by subrings*. Minar displays the data structure by mapping each of two or more categories to a quadrant of a square.

Andrews teaches a technique of displaying directory information by *mapping each of two or more categories to a corresponding pie segment and the subcategories are separated by subrings* (Andrews, 2. Information Slices and FIG. 2)

Instead of using quadrants of a square for displaying, obviously, a pie chart with a plurality of subrings as taught by Andrews, could be used to represent the categories and subcategories. By using the segments of a pie chart to represent groups of information, the number of category of a web site that is greater than four could be handled and displayed to a user.

Regarding claims 25-27, Minar teaches a computer system and program for executing the method of visualizing the crowds at a web site by:

creating an instance of a mapping data structure for a given web site, the mapping data structure representing two or more categories by dividing each of the categories into subcategories of ordered levels of specificity; dividing each of the ordered levels of specificity into a grouping of subcategories of the same levels of

Art Unit: 2168

specificity (As disclosed in "Visualizing the Crowds at a Web Site" (The Site Map of a web site at the IT Media Lab as an *instance of a mapping data structure for a web site*, the Site Map representing two or more categories, e.g., Software Agents, Synthetic Characters..., each of the categories divided into subcategories of ordered levels of specificity, e.g., each topic divided into four kinds of pages as the first level of specificity, e.g., pages for topic, pages for a project..., each kind of page is a group of particular pages under that kind as the second level, each of the ordered levels of specificity being a grouping of subcategories of the same levels of specificity, e.g., the first level of specificity is a grouping of four topics as subcategories at the same levels of specificity (Minar, "Visualizing the Crowds at a Web Site"-Page 186-187 and the Java Applet));

displaying the subcategories and the grouping of subcategories by level of specificity in geometric pattern such that the subcategories are graphically depicted within a corresponding category of the two or more categories (As discussed above, the full dynamic visualization displaying the subcategories and the grouping of subcategories by level of specificity in a geometric pattern, e.g., four kinds of pages as subcategories: page for the topic as a whole (shown in red), for a project (green)... are grouped at each quadrant under a topic as level of specificity in a geometric pattern, and the purpose is to graphically depict the subcategories within a corresponding category of the two or more categories, i.e., page for the topic as a whole (shown in red), for a project (green), for a person (blue), and for a course (yellow) are represented within Software Agents);

mapping information about people, activities, and social interactions at the web site onto said visual, geometric pattern (the circles as in CROWD VISUALIZATION represent people near the documents they are currently visiting, VISUALIZATION, and popular groups of pages on the web site are visibly crowded with people jostling around as they move from page to page, and seldom-visited portions of the site are identifiable by faded color, CROWD DYNAMICS).

The difference between Minar and the current invention is the displaying of the categories. The current invention displays the data structure by *defining the subcategories by subrings*

Art Unit: 2168

and *mapping a corresponding category to a pie segment*. Minar displays the data structure by mapping each of two or more categories to a quadrant of a square.

Andrews teaches a technique of displaying directory information by *defining the subcategories by subrings and mapping a corresponding category to a pie segment*. (Andrews, 2. Information Slices and FIG. 2)

Instead of using quadrants of a square for displaying, obviously, a pie chart with a plurality of subrings as taught by Andrews, could be used to represent the categories and subcategories. By using the segments of a pie chart to represent groups of information, the number of category of a web site that is greater than four could be handled and displayed to a user.

Regarding claim 2, Minar and Andrews, in combination, teach all of the claimed subject matter as discussed above with respect to claim 1, Minar further discloses *the data structure includes one or more sections, the sections being logical intersections of one of the categories with one of the levels of specificity* (e.g., /people/nelson as in SITE MAP).

Regarding claim 5, Minar and Andrews, in combination, teach all of the claimed subject matter as discussed above with respect to claim 1, Minar further discloses *the categories include any one or more of the following: a product category, a service category, a category class, a category list, a product class, a list of products in a class, a product specification, a service class, a list of services, and a service specification* (SITE MAP).

Regarding claim 6, Minar and Andrews, in combination, teach all of the claimed subject matter as discussed above with respect to claim 1, Minar further discloses *the levels of specificity*

Art Unit: 2168

include any one or more of the following: category class, category list, offering specification, product class, list of products in a class, product specification, service class, list of services, and a service specification (SITE MAP).

Regarding to claim 24, Minar and Andrews, in combination, teach all of the claimed subject matter as discussed above with respect to claim 1, Minar further discloses *the social information mapped in the data structure is served over one or more of the network connections for display of one or more visual districts on one or more clients* (INDIVIDUALS and CROWD VISUALIZATION).

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Minar et al. ["Visualizing the Crowds at a Web Site", The Java Applet at <http://www.media.mit.edu/~nelson/research/crowdvis>], Andrews et al. [Information Slices: Visualizing and Exploring Large Hierarchical using Cascading, Semi-Circular Discs] as applied to claim 2 above, and further in view of Hazlehurst et al. [USP 6,289,353 B1].

Regarding claim 3, Minar and Andrews, in combination, teach all of the claimed subject matter as discussed above with respect to claim 2, but does not explicitly teach *one or more subcategories have a degree of closeness relating the section to one or more other sections*. Hazlehurst teaches *one or more subcategories have a degree of closeness relating the section to one or more other sections* (Hazlehurst, FIG. 10A-B, Cols. 12-13). Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the Minar method by including the degree of closeness as taught by Hazlehurst in order to represent the data sets of major areas of interest in specific details representing by subcategories.

Art Unit: 2168

Regarding claim 4, Minar, Andrews and Hazlehurst, in combination, teach all of the claimed subject matter as discussed above with respect to claim 3, Hazlehurst further discloses *the degree of closeness relates to any one or more of following: a physical closeness of location of physical items represented by the respective sections, a relational closeness between one or more users and one or more objects, a relational closeness between one or more users, a semantic closeness of descriptions of items represented by the respective sections, and a behavioral closeness of pattern of use* (Hazlehurst, FIG. 10A-B, Cols. 12-13).

Claims 7-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Minar et al. ["Visualizing the Crowds at a Web Site", The Java Applet at <http://www.media.mit.edu/~nelson/research/crowdvis>], Andrews et al. [Information Slices: Visualizing and Exploring Large Hierarchical using Cascading, Semi-Circular Discs] as applied to claim 2 above, and further in view of Nortel et al. [WebQuery: Searching and Visualizing the Web through Connectivity].

Regarding claim 7, Minar and Andrews, in combination, teach all of the claimed subject matter as discussed above with respect to claim 1, but does not explicitly disclose the step of *collecting information about one or more nodes located on one or more of the districts*. Nortel teaches a method for searching and visualizing the Web, Nortel further discloses the step of *collecting information about one or more nodes located on one or more of the districts* (Nortel, pages 5-7). Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the Minar method by including the step of collecting information about one or more nodes as taught by Nortel in order to represent the data sets of major areas of interest in specific details representing by subcategories.

Art Unit: 2168

Regarding claim 8, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 7, Nortel further discloses *the nodes are differentiated by any one or more node functions* (Nortel, pages 5-6).

Regarding claim 9, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 8, Minar further discloses *the node functions include any one or more of the following: initiating a chat session, providing information, causing a user to be associated with a node location, providing access to sales information, providing access to a salesman, and changing a browser page to one that has information relating to the node* (Minar, INTRODUCTION).

Regarding claim 10, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 7, and the MIT Media Lab Web Site as disclosed by Minar is *one or more of the nodes is a landmark that marks a salient location on one or more of the districts*.

Regarding claim 11, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 10, and the MIT Media Lab Web Site as disclosed by Minar is *the salient location is fixed and associated with one of a plurality of business categories*.

Regarding claim 12, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 10, and the MIT Media Lab Web Site as disclosed by Minar is *the salient location can change in time and is associated with an activity*.

Art Unit: 2168

Regarding claim 13, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 12, Minar further discloses *the activity is one or more of the following: a current "hot spot", "a list of most popular pages in a computer section", a public chat, a sale, a special product offering, a special service offering, and a sales agent availability* (Minar, SITE MAP).

Regarding claim 14, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 10, Minar further discloses *the salient location is personally meaningful to the user* (Minar, CROWD VISUALIZATION).

Regarding claim 15, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 14, the MIT Media Lab Web Site as disclosed by Minar is *the salient location represents any one or more of the following: a user's buddy, a chat buddy, a private chat, a user's favorite spot, and a user with common interest*.

Regarding claim 16, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 7, and the claimed *the system comprising one or more paths, each path connecting two or more nodes* is an inherent feature of World Wide Web.

Regarding claim 17, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 16, and the claimed *the path links two or more of the nodes to associate connectivity relationships among the nodes* is an inherent feature of World Wide Web.

Art Unit: 2168

Regarding claim 18, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 16, and the claimed *a path is associated with one of the following: a user's path through one or more of the districts, a customer's path through one or more of the districts, a preferred path of a group of users through one or more of the districts, a preferred path of a group of users with common interests through one or more of the districts, and a preferred path of a group of users with complementary interests through one or more of the districts* is an inherent feature of World Wide Web.

Regarding claim 19, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 7, Nortel further discloses *one or more node sets, each node set containing one or more nodes clustered in nearby locations in one or more of the districts* (Nortel, pages 3-5).

Regarding claim 20, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 19, Nortel further discloses *a node set represent a relationship among two or more nodes located in one or more of the districts* (Nortel, pages 3-5).

Regarding claim 21, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 19, Nortel further discloses *where one or more of the node sets is associated with one of the following: a density of users gathered in one or more adjacent node locations, a set of node locations marking results of a search, a set of node locations related by a semantic attribute, a set of node locations visited by a group of users with common interests, a set of node locations visited by a group of users with complementary interests, and a crowd of users* (Nortel, pages 3-5).

Art Unit: 2168

Regarding claim 22, Minar, Andrews and Nortel, in combination, teach all of the claimed subject matter as discussed above with respect to claim 19, Nortel further discloses *one or more of the node sets has a node set function* (Nortel, pages 3-5).
